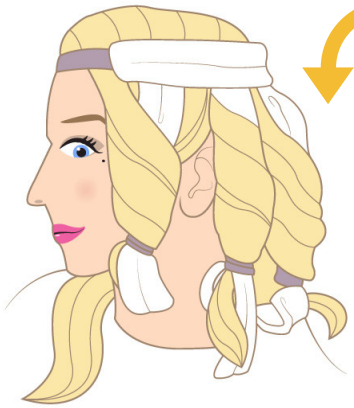
Octocurl™
easy heatless hair styling

Quick Start Guide

#1 - WRAP HAIR around strips.
Start with barely damp hair until you determine how long your hair takes to dry with Octocurl.
(tip: the tighter the wrap, the longer the drying time)

- *1 strip for tighter curls or for shorter &/or fine hair*
- *2 strips for soft loose curls*
- *3-4 strips for very soft curls on longer hair*

#2 - SECURE ENDS with the elastic loop twisting around 2-3 times (depending on how many strips used and the thickness of your hair section). Leave 1 inch or so of your ends out so the wrap stays intact and you don't get kinks.



#3 - LEAVE STRIPS DOWN for looser curls

OR

ATTACH STRIPS to headband using one of the instructed methods *(in the instruction booklet included with the product)* to keep wraps tighter and more secure.

#4 - LET DRY

Wear overnight or leave in for a few hours. Hair needs to be completely dry for heatless curls to set. You can use a *hair dryer to speed drying time *(or heat-set curls if starting with dry hair).*

* Use low air the first time to ensure your hair doesn't tangle easily in the microfiber.

Have fun experimenting! More tips in the instruction booklet included with the product and on our website www.octocurl.com
